

Company Policy: Data Privacy and Security Policy

Why We Have This Policy

Every person at our company works with information that matters. Some of it belongs to our clients, some to our team, and some to the business itself. Keeping this information safe is part of our everyday work. This policy explains what you can and cannot do with company data, so everyone knows how to protect it.

Who This Policy Covers

This policy applies to everyone who works with us. That includes employees, interns, contractors, and any partner who has access to our systems or records.

What We Mean by “Data”

- Personal details like names, addresses, and phone numbers
- Business information such as contracts, budgets, and product ideas
- Login details including usernames and passwords
- Sensitive records like payroll, health information, or legal files

The Basics You Need to Follow

1. **Only use what you need:** Don't open or use information unless your role requires it.
2. **Protect your logins:** Use strong passwords, company-approved devices, and two-step verification.
3. **Keep files secure:** Save documents only in company-approved systems. Don't move files to personal accounts or devices.
4. **Be mindful of conversations:** Avoid discussing sensitive topics on personal messaging apps, public spaces, or social media.
5. **Report problems quickly:** If you lose a device, get a suspicious email, or see a possible data breach, tell IT right away.

Training and Support

When you join the company, you'll receive training on how to protect data. Each year, you'll take a short refresher. Managers will also remind teams about best practices during the year.

What's Expected From You

- Keep your passwords private
- Lock your screen when leaving your desk
- Dispose of paper documents in secure bins or shredders
- Follow backup steps provided by IT

What You Can Expect From Us

- Secure tools and systems for daily work
- Regular updates to keep systems protected
- Compliance with all data protection laws
- Support if you report a concern in good faith

If the Rules Are Broken

Not following this policy can lead to disciplinary action. This might be a warning, suspension, or even termination, depending on the situation. In serious cases, legal action may also apply.

Everyday Example

A team member logs into the system with a security code sent to their phone. They create a client report and save it in the secure company drive. Instead of emailing the file, they share it only with the project team. While traveling, they connect to company systems through the VPN to stay safe on public Wi-Fi.
